USSN 10/533,734 Art Unit: 1648

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (currently amended) An immunogenic composition comprising:
- (a) a polynucleotide that comprises a sequence encoding an HIV gp120 envelope protein operably linked to a heterologous promoter, wherein the gp120 encoding sequence is linked to a sequence encoding HIV RT and a sequence encoding HIV Gag and a sequence encoding HIV Nef, such that said polynucleotide encodes to encode a fusion protein containing gp120, RT, Gag and Nef, -containing fusion protein and wherein the encoded HIV gp120 envelope protein lacks is lacking a functional secretion signal and is substantially non-glycosylated when expressed in a mammalian target cell, and
- (b) at least one pharmaceutically acceptable exipient, diluent, and/or or carrier.
- 2-6. canceled
- 7. (currently amended) The immunogenic composition of claim 1, wherein the polynucleotide encodes a fusion protein is-selected from the group consisting of: a fusion protein comprising in the 5' to 3' direction: gp120-RT-Nef-Gag, and a fusion protein comprising in the 5' to 3' direction: RT-Nef-Gag-gp120.
- 8 11, canceled.
- 12. (currently amended) The immunogenic composition of claim 1, wherein the polynucleotide encodes HIV Gag comprises comprising one or both of P17 and P24.
- 13. (previously presented) The immunogenic composition of claim 1, wherein at least one of the sequences encoding gp120, Nef, Gag, and RT is codon optimised to resemble codon usage in a highly expressed human gene.

USSN 10/533,734 Art Unit: 1648

- 14. (Currently amended) An immunogenic composition comprising:
 - (a) a nucleic acid <u>molecule encoding a fusion protein</u> comprising in the 5' to 3' direction <u>gp120 RT Nef Gag</u>;

a polynucleotide sequence selected from the group consisting of codon optimised gp120 lacking a secretion signal mRT trNef p17/24 Gag, and mRT trNef p17/24 Gag codon optimized gp120 lacking a secretion signal,

wherein the <u>nucleic acid sequences encoding gp120</u>, RT and Gag are codon optimized,

wherein the encoded gp120 lacks a functional secretion signal;

and

wherein the encoded RT comprises a mutation that substantially inactivates reverse transcriptase activity;

wherein the encoded Nef is a truncated Nef lacking N-terminal amino acids 1-65; wherein the encoded Gag comprises p17 and p24;

(b) at least one pharmaceutically acceptable excipient, diluent, or and/or carrier.

- 15. (previously presented) The immunogenic composition of claim 1, wherein the promoter is from an HCMV IE gene.
- 16. (previously presented) The immunogenic composition of claim 15, wherein a 5' untranslated region comprising exon 1 of the HCMV IE gene is between the promoter and the coding sequences.
- 17. (currently amended) An immunogenic composition <u>according to claim 1</u>, <u>further</u> comprising <u>a set of polynucleotides comprising the polynucleotide of claim 1</u>, and at <u>least one further a polynucleotide encoding Tat.</u>
- 18. (currently amended) The immunogenic composition of claim 17, wherein the polynucleotide encoding the fusion protein and the polynucleotide encoding Tat polynucleotides are contained on a single vector and are under the control of at least one separate a single promoter.

USSN 10/533,734 Art Unit: 1648

- 19. 20. canceled.
- 21. (previously presented) The immunogenic composition of claim 1, wherein the polynucleotide sequence encoding the fusion protein is in a vector.
- 22. (previously presented) The immunogenic composition of claim 21, wherein the vector is a double stranded DNA plasmid.
- 23. (previously presented) The immunogenic composition of claim 21, wherein the vector is a replication defective adenovirus vector.
- 24. (currently amended) The immunogenic composition of claim 23, wherein the replication defective vector is selected from the group consisting of: Pan 9, Pan 5, Pan 6 and Pan 7.
- 25. 27. Canceled
- 28. (previously presented) The immunogenic composition of claim 1, further comprising an adjuvant.
- 29. (currently amended) The immunogenic composition of claim 1 <u>comprising a carrier</u>, wherein the carrier is a plurality of particles.
- 30. (previously presented) The immunogenic composition of claim 1, wherein the immunogenic composition is suitable for delivery in a prime boost format.
- 31. (previously presented) An intradermal delivery device comprising the immunogenic composition of claim 1.
- 32. 35. (canceled)

- 36. (currently amended) The immunogenic composition of claim $\underline{29}$ +, wherein the carrier is gold beads.
- 37. (New) The immunogenic composition of claim 17, wherein the polynucleotide encoding the fusion protein and the polynucleotide encoding Tat are contained on a single vector and are under the control of separate promoters.
- 38. (New) The immunogenic composition of claim 1, wherein the sequence encoding HIV Gag encodes both p17 and p24.
- 39. (New) The immunogenic composition of claim 1, wherein the sequence encoding RT comprises a mutation that substantially inactivates reverse transcriptase activity in the encoded RT.
- 40. (New) The immunogenic composition of claim 1, wherein the sequence encoding Nef encodes a truncated Nef lacking N-terminal amino acids 1-65
- 41. (New) An immunogenic composition comprising:
 - (a) a nucleic acid molecule encoding a fusion protein comprising in the 5' to 3' direction RT Nef Gag –gp120; wherein the sequences encoding gp120, RT and Gag are codon optimized; wherein the encoded RT comprises a mutation that substantially inactivates reverse transcriptase activity; wherein the encoded Nef is a truncated Nef lacking N-terminal amino acids 1-65; wherein the encoded Gag comprises p17 and p24; and wherein the encoded gp120 lacks a functional secretion signal; and
 - (b) at least one pharmaceutically acceptable excipient, diluent, or carrier.
- 42. (New) The immunogenic composition of claim 41, further comprising a polynucleotide encoding Tat.

USSN 10/533,734 Art Unit; 1648

- 43. (New) The immunogenic composition of claim 14, further comprising a polynucleotide encoding Tat.
- 44. (New) The immunogenic composition of claim 14, wherein the polynucleotide sequence encoding the fusion protein is in a vector.
- 45. (New) The immunogenic composition of claim 41, wherein the polynucleotide sequence encoding the fusion protein is in a vector.
- 46. (New) The immunogenic composition of claim 14, wherein the vector is a replication defective adenovirus vector.
- 47. (New) The immunogenic composition of claim 41, wherein the vector is a replication defective adenovirus vector.
- 48. (New) The immunogenic composition of claim 41, further comprising an adjuvant.
- 49. (New) The immunogenic composition of claim 41, further comprising an adjuvant.
